

### INVESTMENT OBJECTIVE

This portfolio is suitable for investors with a low income need. The primary investment objective is to provide capital growth over the long term, with moderate to high levels of volatility. The portfolio is divided into term components, allocating to income-generating funds in the short-term component for income provisions. While allocating to growth funds in the long-term component for capital appreciation. Due to the low income need, this portfolio has a bias towards growth funds. The portfolio will be rebalanced when markets are favourable.

### RISK PROFILE

### MEDIUM - HIGH

- Medium-high risk portfolios generally have higher levels of equity exposure, resulting in higher volatility compared to portfolios with lower equity exposure.
- Higher exposure to equity and other growth assets also increases the probability of capital loss (permanent or temporary) compared to lower risk portfolios.
- However, the potential long-term investment returns from higher risk portfolios are expected to be higher than lower risk portfolios.

## DISCLAIMER

Managed by: Naviga Solutions. Authorised Financial Service Provider, FSP Number 381.

The fund allocation (above) indicates the model portfolio fund holdings, which are quantitatively and qualitatively assessed on a quarterly basis by the independent investment committee. Where any of the above funds are not available on any particular Linked Investment Service Provider (LISP) platform, an appropriately comparable replacement fund is selected by the investment committee. Due to the possible fund composition variations resulting from such comparable replacements, the actual overall asset allocation, fees and returns may differ across platforms. Periodic portfolio rebalancing is initiated by the investment committee to realign strategic allocations whilst taking specific account of the intended risk and return profiles of the portfolios as well as capital gains tax and cost effects. Past performance is not indicative of future performance. The capital or the return of a portfolio is not guaranteed. A wrap fund is a portfolio consisting of a number of underlying investments wrapped into a single product. Wrap funds are not legal CIS funds of funds as the wrap fund itself is not a collective investment portfolio, but is simply a collection of separate collective investment portfolios and money market accounts. With a wrap fund the investor has direct ownership of the underlying investments. Wrap funds are not regulated by the Collective Investment Schemes Control Act and do not have a separate legal status. They are regulated by the same legislation that applies to Linked Investment Services Providers (LISPs), namely the Stock Exchanges Control Act and the Financial Markets Control Act. Investors should take note that any changes made within a wrap fund can trigger capital gains tax.

This document should not be seen as an offer to purchase any specific product and is not to be construed as advice or guidance in any form whatsoever. Investors are encouraged to obtain independent professional investment and taxation advice before investing in the model portfolios.

The portfolio's performance numbers are based on a master portfolio tracked in the Morningstar Direct system. These performance numbers are net of all underlying managers TER's, but gross of the model portfolio management, LISP and advice fees. The Effective Annual Cost (EAC) can be obtained from the specific Linked Investment Service Provider (LISP).
